

1       **ABSTRACT**

2               A boat hook and line handling device designed to  
3       facilitate positioning and handling of a mooring or docking  
4       line during a boat docking operation is removably mounted on  
5       an extendable pole. The device has a clip with an elongated  
6       body and a free end. An attachment connects the clip with the  
7       boat hook shaft and encircles the shaft of the boat hook. A  
8       docking line may be wedged between the clip and the shaft of  
9       the boat hook to form a loop to engage a piling.
